Excerpt from Steam Heating: A Manual of Practical Data, Compiled by the General Engineering Committee of Warren Webster Company

The subject of Heating and Ventilation has been covered broadly in many handbooks that are available for reference, but there has been a demand also for a book of information confined exclusively to Steam Heating and covering that field in all necessary detail.

Steam Heating is therefore the one topic of this volume and the editors have aimed to cover the subject with comprehensive data, arranged in such convenient and useful form as will best meet the needs of technical men in the engineering and contracting fields.

The information given is authentic, being based upon actual practice and largely upon the experience of Warren Webster & Company, who, as pioneers, have specialized for more than thirty years in the effective use of steam for all heating purposes. Many of the designs and methods originated by this firm are now the recognized service standards.

Special articles and helpful suggestions have been contributed by John A. Serrell, by the General Engineering Committee, and by John B. Dobson, Ralph T. Coe, William Roebuck, Russell C. Brown, William F. Bilyeu and other members of the Warren Webster & Company organization.

"Steam Heating" offers the best thought of this organization, and as part of Webster Service is intended to be of real value throughout the profession. The observance of good judgment and painstaking care in following its teachings will do much toward obtaining creditable and satisfactory results.

If further explanations, additional information or helpful co-operation are desired, the Engineers and Service Men in the branch offices of Warren Webster & Company throughout the country are always available for consultation and assistance.
