PROVERA Tablet: Treats Irregular Menstrual Periods, and Bleeding Caused by a Hormone Imbalance; also Treats Some Forms of Cancer, and Uterine Disorders James Lee Anderson

“Although, your health condition may impact your everyday life, do not let it define who you are.”

PROVERA (medroxyprogesterone) is used to treat abnormal menstruation (periods) or irregular vaginal bleeding. PROVERA is also used to bring on a normal menstrual cycle in women who menstruated normally in the past but have not menstruated for at least 6 months and who are not pregnant or undergoing menopause (change of life). PROVERA is also used to prevent overgrowth of the lining of the uterus (womb) and may decrease the risk of cancer of the uterus in patients who are taking estrogen.

Medroxyprogesterone is in a class of medications called progestins. It works by stopping the growth of the lining of the uterus and by causing the uterus to produce certain hormones. Thanks and may you have a good understanding about this drug—PROVERA. You may want to share this book with your family and friends who may be in need of help and would want to use this medicine. Take care, and as always, be well!
