Model Categories (Mathematical Surveys and Monographs) Mark Hovey
[The book] starts with an account of the definitions, and a development of the homotopy theory of model categories. This is probably the first time in which the important notion of cofibrant generation has appeared in a book, and the consideration of the 2-category of model categories and Quillen adjunctions is another interesting feature. --Bulletin of the London Mathematical Society Model categories are used as a tool for inverting certain maps in a category in a controllable manner. As such, they are useful in diverse areas of mathematics. The list of such areas is continually growing. This book is a comprehensive study of the relationship between a model category and its homotopy category. The author develops the theory of model categories, giving a careful development of the main examples. One highlight of the theory is a proof that the homotopy category of any model category is naturally a closed module over the homotopy category of simplicial sets. Little is required of the reader beyond some category theory and set theory, which makes the book accessible to advanced graduate students. The book begins with the basic theory of model categories and proceeds to a careful exposition of the main examples, using the theory of cofibrantly generated model categories. It then develops the general theory more fully, showing in particular that the homotopy category of any model category is a module over the homotopy category of simplicial sets, in an appropriate sense. This leads to a simplification and generalization of the loop and suspension functors in the homotopy category of a pointed model category. The book concludes with a discussion of the stable case, where the homotopy category is triangulated in a strong sense and has a set of small weak generators.

From reader reviews:

Sophia Whitfield:

This Model Categories (Mathematical Surveys and Monographs) usually are reliable for you who want to become a successful person, why. The explanation of this Model Categories (Mathematical Surveys and Monographs) can be one of several great books you must have is giving you more than just simple looking at food but feed you with information that probably will shock your previous knowledge. This book is usually handy, you can bring it everywhere and whenever your conditions in e-book and printed versions. Beside that this Model Categories (Mathematical Surveys and Monographs) forcing you to have an enormous of experience such as rich vocabulary, giving you tryout of critical thinking that could it useful in your day exercise. So , let's have it and enjoy reading.

Jose Gower:

Don't be worry for anyone who is afraid that this book will filled the space in your house, you might have it in e-book technique, more simple and reachable. That Model Categories (Mathematical Surveys and Monographs) can give you a lot of friends because by you looking at this one book you have thing that they don't and make you actually more like an interesting person. This kind of book can be one of a step for you to get success. This book offer you information that maybe your friend doesn't know, by knowing more than other make you to be great people. So , why hesitate? Let me have Model Categories (Mathematical Surveys and Monographs).

Rose Bennett:

That guide can make you to feel relax. This particular book Model Categories (Mathematical Surveys and Monographs) was colorful and of course has pictures around. As we know that book Model Categories (Mathematical Surveys and Monographs) has many kinds or type. Start from kids until teenagers. For example Naruto or Investigator Conan you can read and believe you are the character on there. Therefore , not at all of book are usually make you bored, any it offers you feel happy, fun and loosen up. Try to choose the best book for you personally and try to like reading that will.

Gerald Allen:

Reading a publication make you to get more knowledge from the jawhorse. You can take knowledge and information coming from a book. Book is composed or printed or descriptive from each source that will filled update of news. In this modern era like right now, many ways to get information are available for a person. From media social like newspaper, magazines, science reserve, encyclopedia, reference book, new and comic. You can add your knowledge by that book. Are you ready to spend your spare time to open your book? Or just seeking the Model Categories (Mathematical Surveys and Monographs) when you necessary it?
