## Our Wonderful World: Astronaut Photography of Earth 2017 Calendar

The International Space Station is primarily a science laboratory in space, but the many astronauts who have made it a home since its first occupants moved in on November 2, 2000, have made an art of photographing Earth's stunning geography through changing light and weather conditions. Flying near to 248 miles above Earth, circling the globe every 92 minutes at 17,500 mph, and inexorably drawn to the scenery below, the space station denizens saw the globe so many times daily, they got to know their favorite land formations and the best conditions to record and savor. Photos from ISS astronauts, who have made these glimpses of Earth famous, such as Chris Hadfield, are included.

These photos are the best of a very special archive. There are images of Saskatchewan, the Florida Keys, the California coast, a hurricane in the Caribbean, Boston, the lights of New York and Paris as never seen before, and the deserts of Australia, and more. The colors are simply astounding! The beautiful yet almost abstract images will make this calendar a lovely gift for everyone.
