Michael Bowles

Machine Learning in Python: Essential Techniques for Predictive Analysis Michael Bowles
Learn a simpler and more effective way to analyze data and predict outcomes with Python

Machine Learning in Python shows you how to successfully analyze data using only two core machine learning algorithms, and how to apply them using Python. By focusing on two algorithm families that effectively predict outcomes, this book is able to provide full descriptions of the mechanisms at work, and the examples that illustrate the machinery with specific, hackable code. The algorithms are explained in simple terms with no complex math and applied using Python, with guidance on algorithm selection, data preparation, and using the trained models in practice. You will learn a core set of Python programming techniques, various methods of building predictive models, and how to measure the performance of each model to ensure that the right one is used. The chapters on penalized linear regression and ensemble methods dive deep into each of the algorithms, and you can use the sample code in the book to develop your own data analysis solutions.

Machine learning algorithms are at the core of data analytics and visualization. In the past, these methods required a deep background in math and statistics, often in combination with the specialized R programming language. This book demonstrates how machine learning can be implemented using the more widely used and accessible Python programming language.

- Predict outcomes using linear and ensemble algorithm families
- Build predictive models that solve a range of simple and complex problems
- Apply core machine learning algorithms using Python
- Use sample code directly to build custom solutions

Machine learning doesn't have to be complex and highly specialized. Python makes this technology more accessible to a much wider audience, using methods that are simpler, effective, and well tested. *Machine Learning in Python* shows you how to do this, without requiring an extensive background in math or statistics.

From reader reviews:

Yadira Singh:

In other case, little folks like to read book Machine Learning in Python: Essential Techniques for Predictive Analysis. You can choose the best book if you like reading a book. Provided that we know about how is important a new book Machine Learning in Python: Essential Techniques for Predictive Analysis. You can add information and of course you can around the world by the book. Absolutely right, due to the fact from book you can understand everything! From your country until finally foreign or abroad you may be known. About simple matter until wonderful thing you may know that. In this era, you can open a book or maybe searching by internet gadget. It is called e-book. You should use it when you feel bored to go to the library. Let's examine.

George Hinnenkamp:

Playing with family inside a park, coming to see the sea world or hanging out with close friends is thing that usually you will have done when you have spare time, after that why you don't try issue that really opposite from that. One particular activity that make you not sensation tired but still relaxing, trilling like on roller coaster you are ride on and with addition details. Even you love Machine Learning in Python: Essential Techniques for Predictive Analysis, it is possible to enjoy both. It is good combination right, you still need to miss it? What kind of hang type is it? Oh come on its mind hangout guys. What? Still don't have it, oh come on its identified as reading friends.

Mary Clement:

Don't be worry if you are afraid that this book will filled the space in your house, you may have it in e-book way, more simple and reachable. This Machine Learning in Python: Essential Techniques for Predictive Analysis can give you a lot of pals because by you checking out this one book you have thing that they don't and make an individual more like an interesting person. This book can be one of one step for you to get success. This e-book offer you information that might be your friend doesn't understand, by knowing more than various other make you to be great men and women. So , why hesitate? Let us have Machine Learning in Python: Essential Techniques for Predictive Analysis.

Michael Sherman:

As a scholar exactly feel bored to help reading. If their teacher inquired them to go to the library or even make summary for some book, they are complained. Just small students that has reading's heart or real their interest. They just do what the instructor want, like asked to go to the library. They go to right now there but nothing reading really. Any students feel that studying is not important, boring and also can't see colorful photographs on there. Yeah, it is to be complicated. Book is very important to suit your needs. As we know that on this time, many ways to get whatever you want. Likewise word says, many ways to reach Chinese's country. So , this Machine Learning in Python: Essential Techniques for Predictive Analysis can make you

truly feel more interested to read.
